PART - I

[Max. Marks : 70

Note : i) All the questions.

ii) Choose the most appropriate answer from the given four alternatives and write the option code and the corresponding answer. 15X1=15

1. Which of the following defines what an object can do?
(a) Operating System (b) Compiler (c) Interface (d) Interpreter
2. Which of the following is constructed by placing expressions within square brackets?
(a) Tuples (b) Lists (c) Classes (d) quadrats
3. If a problem can be broken into subproblems which are reused several times, the problem possesses which property?
(a) Overlapping subproblems (b) Optimal substructure (c) Memoization (d) Greed
4. This symbol is used to print more than one item on a single line.
(a) Semicolon(;) (b) Dollor(\$) (c) comma(,) (d) Colon(:)
5. The condition in the if statement should be in the form of
(a) Arithmetic or Relational expression (b) Arithmetic or Logical expression (c) Relational or Logical expression (d) Arithmetic expression
6. Which of the following keyword is used to exit a function block?
(a) define (b) return (c) finally (d) def
7. What is stride?
(a) index value of slide operation (b) first argument of slice operation (c) second argument of slice operation (d) third argument of slice operation
8. Let list1=[2,4,6,8,10], then print(List1[-1]) will result in:
(a) 10 (b) 8 (c) 4 (d) 6
9. A private class variable is prefixed with:
(a) _ (b) && (c) ## (d) **
10. What will be the output of the following code?

```
str1 = "Chennai Schools"  
str1[7] = "-"
```

(a) Chennai-Schools (b) Chenna-School (c) Type error (d) Chennai
11. Who is called Father of Relational Database from the following?
(a) Chris Date (b) Hugh Darween (c) Edgar Frank Codd (d) Edgar Frank Cadd
12. Queries can be generated using:
(a) SELECT (b) ORDER BY (c) MODIFY (d) ALTER
13. Which of the following creates an object which maps data to a dictionary?
(a) listreader () (b) reader () (c) tuplereader () (d) DictReader ()
14. Importing C++ program in a Python program is called:
(a) wrapping (b) Downloading (c) Interconnecting (d) Parsing
15. Which of the following module should be imported to visualize data and information in Python?
(a) CSV (b) getopt (c) mysql (d) matplotlib

PART – II

II. Answer any 6 of the following:

6x

Question number 24 is compulsory.

16. Why scope should be used for variable. State the reason.
17. Write short notes on Exponent data.
18. What is base condition in recursive function?
19. How will you delete a string in Python?
20. What is normalization?
21. Differentiate compiler and interpreter.
22. How will you sort more than one column from a csv file? Give an example statement.
23. What is the advantage of declaring a column as "INTEGER PRIMARY KEY"?
24. Find the output for the following python snippet.

```
i=10
while(i<20):
    print(i,end = 't')
    i=i+2
```

PART – III

III. Answer any SIX of the following:

6x

Question number 33 is compulsory.

25. Describe about Algorithmic complexity and its types.
26. List the differences between break and continue statements.
27. What are the points to be noted while defining a function?
28. What is the use of format()? Give an example
29. Find the output for the following python snippet.

```
>>> MyList=[21,76,98,23]
>>> print(max(MyList))
>>> print(sum(MyList))
>>> type(MyList)
```
30. What is the difference between the write mode and append mode?
31. What is sys.argv? What does it contain?
32. Write any three uses of data visualization.
33. Write a program to check and print if the given number is odd or even using class.

PART – IV

IV. Answer all questions:

5x

34. (a) How will you facilitate data abstraction Explain it with suitable example. (OR)
(b) Write any five benefits in using modular programming
35. (a) Explain the concept of Dynamic programming with suitable example. (OR)
(b) Describe in detail the procedure Script mode programming
36. (a) Write the output for the following print statements.
Tup1 = (12, 78, 91, "Tamil", "Telugu", 3.14, 69.48)
(i) print(Tup1) (ii) print(Tup1[2:5]) (iii) print(Tup1[4:])
(iv) print(Tup1[:5]) (v) type (Tup1) (OR)
(b) Write a program to display all 3 digit odd numbers.
37. (a) Write the different types of constraints and their functions. (OR)
(b) Write the syntax for getopt() and explain its arguments and return values.
38. (a) Explain about string operators in python with suitable example. (OR)
(b) Explain in detail the types of pyplots using Matplotlib.
